ジュニア女子ダブルス (GD)

Figure 1: A detailed phylogenetic tree showing the relationships between 54 Japanese populations of *Chamaecrista nictitans*. The tree is rooted at the bottom left and branches out to the right. Each population is represented by a number (1-54) and its name in Japanese, followed by its prefecture in parentheses. The tree is divided into several major clades, with some clades further subdivided into smaller groups. The populations are listed in two columns, with the first column containing populations 1-27 and the second column containing populations 28-54. The tree is rooted at the bottom left, with the root node labeled 51. The tree is rooted at the bottom left, with the root node labeled 51. The tree is rooted at the bottom left, with the root node labeled 51.
